

Solimar to Showcase Enhancements in Color and DBCS Support at On Demand Conference *Latest Print Director Enterprise Version Adds Transpromo Migration Support*

SAN DIEGO, CA - February 25, 2008 - Solimar Systems, Inc., a leading global provider of production printing and secure document delivery solutions, today announced enhancements in the latest version of Solimar® Print Director Enterprise™ (SPDE). Solimar's client-server-based enterprise output management solution is designed to improve the performance of production output processes and optimize management control.

The latest version of SPDE adds color and printer optimizations for driving high speed, full color, digital printing devices that ingest IPDS, PostScript and PDF. SPDE also has additional functionality for double byte character support (DBCS) for Asian markets and companies supporting them.

"Many of our clients are migrating to full color printers so they can add variable targeted marketing messages to their critical transactional applications," states Mary Ann Rowan, Vice President of Sales and Marketing. "Using SPDE, these clients can optimize their output and save valuable time and money by eliminating pre-printed forms and static inserts and fully automate their digital workflows."

The following are some of the additional enhancements in Version 6.1:

- Import/Export of targets and paths into other configurations
- Enhanced user control added for IPDS printers
- Expanded security policies
- Added TCP/IP printer failover support
- GUI enhancements for System Manager and Queue Manager
- Remote licensing enables centralized control for multiple Solimar systems

Solimar solutions allow thousands of organizations around the world to easily expand and control their enterprise production print processes by providing robust data stream transforms, device optimizations and print stream re-engineering and secure web presentment. Building on a history of successful technology development, the latest release of the Solimar Print Director Enterprise system further demonstrates Solimar's continued commitment to delivering powerful output management solutions for its customers.

About Solimar Systems, Inc.

Founded in 1991, Solimar Systems, Inc. is a leading developer of enterprise output management solutions for mainframe, midrange, and PC/network environments. Installed in thousands of sites around the world, including nearly 50% of the Fortune 100, Solimar solutions satisfy a wide range of customer requirements by combining document creation, integrated physical communications connectivity, data stream transforms, and sophisticated print queue management with secure document distribution. Experts in legacy and modern data streams, Solimar solutions provide essential infrastructure to organizations in a variety of industries including insurance, financial services, banking, pharmaceuticals, telecommunications, healthcare, government, education, retail, manufacturing, utilities, distribution and print service bureaus.
